Alternative repair methods shouldn't look like alternatives.

Porsche Dynamic Repair.

You drive a Porsche. So you've fulfilled a dream. A vehicle which represents style and driving pleasure like no other. And, of course, performance. Just like Porsche Service – Centre of Excellence.

Porsche Dynamic Repair by Porsche Service offers alternative repair methods. These will help you to keep your dream intact.

Whether you've a stone chip on the screen, a dent in a panel, a scratch on the paint or a split in the leather, our specially trained staff will always try to repair parts rather than just replace them. This saves on time, costs and resources.

Because minor damage is annoying enough. It usually results from external factors like stone chips, hailstones, or simply everyday use. That not only spoils the car's looks and consequently your pleasure, but it also affects the value of your vehicle. Porsche Dynamic Repair helps to ensure that this remains as high as possible, and that every original part remains on your Porsche.

Thanks to the high-quality repair processes used, very little or no trace of damage is left. The parts are restored to almost new condition. Inside and out. So that you can enjoy your car for as long as possible. Down to the smallest detail.

However, if you don't think this is the right type of repair for your vehicle, we'll be pleased to carry out the repair using Porsche Original replacement parts.

What should you look for in windscreen repair?

Transparent costs and crystal-clear results.

Glass repair.

Flat chip up to 5 mm diameter

Bull's eye chip up to 5 mm diameter

Rough chip up to 40 mm diameter

Star crack up to 40 mm diameter

For safety reasons, glass cannot be repaired in the area marked

A stone impact may seem slight, but safe driving is only possible if you have good visibility.

Glass repair prevents any cracks in the glass from spreading and breaking the windscreen. Prompt action is essential. The repair uses a special synthetic resin which is applied to the cleaned damage site using a vacuum method. Hardening is accelerated using UV light. This method can normally be used to repair stone chips which are more

Star crack after repair

Boxster S

than 10 cm from the edge and lie outside the driver's field of vision. Stone chips with a diameter of over 5 mm and cracks over 50 mm long cannot be repaired. In this case, the glass must be replaced to ensure safety at higher speeds.

repaired within the technical and legal limits. We will also deal with your insurance claim if required.

We would be pleased to advise on what types of stone chip can be

**Your Porsche has a unique form.
And so it should remain.**

Dent repair.

Dents in side wheel arch

911 Carrera S

Using the dent repair service from Porsche Dynamic Repair, numerous dents and bulges without paint damage can be repaired virtually without trace. The method can be used on steel and aluminium panels. The time and costs involved are comparatively low as no parts have to be replaced, and there is

no sanding, filling and painting work. Skilled craftsmen using specialist equipment will repair and eliminate spot dents. The original structure of your Porsche remains unchanged.

Using this method, you can usually repair damage up to 50 mm in diameter. The repair depends on the size and number of dents and the deformation depth and position of the dent. However, minor damage to the edges of supporting body structures cannot be repaired.

**For a small scratch,
there's no need to treat the entire body.**

Paint repair.

Paint damage on front bumper

911 Carrera S

If you're involved in active sport, scratches and bruises are unavoidable. But 'wound healing' can be accelerated at Porsche.

Our trained staff are able to work on only the damaged area, provided the paint damage is minor. The original part remains on the vehicle, thus saving time and costs.

Partial painting is possible on both plastic and metal parts, and for both solid two-coat and metallic paint finishes. It's important that the scratches and grazes only extend to the paint. Damage up to 3.5 cm in diameter and scratches up to 10 cm length can usually be repaired with excellent results, as can minor paint damage on edges.

It's not only new shoes that shine.

Alloy wheel refurbishment.

Alloy wheel with minor damage

18 inch Carrera wheel

Alloy wheels are a real eyecatcher. However, they are often exposed not only to glances, but also severe stresses, sharp-edged gravel or kerbstones.

Minor blemishes on alloy wheels can be rectified if the extent of the damage allows. It is important that grazes and scratches affect only the paint and do not extend to the base material. These restrictions

help to guarantee maximum safety even during performance driving.

The decisive factor in communication?

That it works faultlessly.

PCM repair.

PCM including navigation system

Porsche Communication Management (PCM), the central information and communication system, is of the same high quality as your Porsche and it is just as suitable for everyday use. However, traces of wear or minor damage, such as a broken SIM card reader, can't

always be avoided during use. Also, operating faults, such as the insertion of several CDs or DVDs in a single drive, can often occur.

Usually, it is possible to repair the PCM and replacement is not required. Please note that your

PCM may be out of use for a few days.

The fact that you drive your Porsche a lot need not be evident from the car.

Interior cosmetics.

Damage to leather

Carbon interior

Damage to plastic

Why should your driving pleasure be reduced by signs of wear in the interior? Areas of damage such as grazes, scratches, pen marks etc., small cracks, cuts and holes up to 18 mm diameter can be eliminated almost totally. Just like most spots or larger stains.

Interior cosmetics provide practical solutions for rendering minor damage almost invisible. On seats, interior trim, dashboard or consoles. We guarantee they will not rub off, and the quality will be excellent.

Porsche Service – Centre of Excellence.

When you have to let your Porsche out of your sight, at least you know it's in the right hands.

Our Service staff will give you personal advice, and always aim to repair parts or components instead of replacing them. This saves money. Parts are only replaced when necessary with Porsche Original parts or Porsche Original exchange parts. Always with a two-year warranty. So your dream car remains in its original state – and retains its value.

Porsche Service has the skilled staff – and specialist equipment – to look after all Porsche vehicles. From classic models to new vehicles, right through to GT models. From simple mechanics to highly complex technology and networked electronics, our staff are regularly trained in the latest repair methods. We also service, repair and restore classic Porsche models. From the 356 to the 911 Type

964. For this we have the Classic Customer Centre or numerous Porsche (Service) Centres specialising in classic vehicles.

You can find out more about Porsche Service from your Porsche Centre or at www.porsche.com/service.
